MILLERSTOWN

Millerstown is a double track N gauge layout of indeterminate period but tends to be run as a steam to diesel transition period layout. The layout plan below is not to scale.

Three operators are usually required to set up and operate the layout. The layout was built using normal construction methods and has only one isolating section, isolation being provided by the insulfrog points used. There is no crossover between inner and outer circuits.

The layout sits at a height of about a metre on its own trestles. The operating position is to the rear of the station (top right of the above photograph).

Here are some pictures of the layout in operation.

If you wish to invite this layout to your exhibition please contact the club via the website at:

secretary@greenockmrc.co.uk

If you are interested in N Gauge modelling and would like to see the layout in operation please e-mail the Club at:
